This draft white paper is for discussion and information purposes only. The information contained herein is subject to change. No part of this draft document is legally binding or enforceable.

There is no guarantee as to the accuracy of or the conclusions reached in this white paper, and this white paper is provided “as is”. Aurei Association does not make and expressly disclaims all representations and warranties, express, implied, statutory or otherwise, whatsoever, including, but not limited to: (i) warranties of merchantability, fitness for a particular purpose, suitability, usage, title or non-infringement; (ii) that the contents of this white paper are free from error; and (iii) that such contents will not infringe third-party rights. Aurei Association shall have no liability for damages of any kind arising out of the use, reference to, or reliance on this white paper or any of the content contained herein, even if advised of the possibility of such damages.

The distribution of AREs and the offer and sale of AREs in certain jurisdictions may be restricted by law. This white paper is not an offer to sell or a solicitation of an offer to buy, nor will any ARE be offered or sold to any person, in any jurisdiction in which such offer, solicitation, purchase or sale would be unlawful under the laws of such jurisdiction.

You are not eligible and you are not to purchase any AREs (as referred to in this white paper) if you are a citizen, resident (tax or otherwise) or green card holder of the United States of America, or a citizen or resident of the Republic of South Africa or Cayman Islands.

No regulatory authority has examined or approved any of the information set out in this White Paper. No such action has been or will be taken under the laws, regulatory requirements or rules of any jurisdiction. The publication, distribution or dissemination of this white paper does not imply that the applicable laws, regulatory requirements or rules have been complied with.

You should consult with your legal, financial, tax and other professional advisors(s) before taking any action in connection with this white paper. The tokens described in this white paper are not intended to constitute securities in any jurisdiction. This white paper does not constitute a prospectus or offer document of any sort and is not intended to constitute an offer of securities or a solicitation for investment in securities in any jurisdiction.

In no event will Aurei Association be liable to any person or entity for any damages, losses, liabilities, costs or expenses of any kind, whether direct or indirect, consequential, compensatory, incidental, actual, exemplary, punitive or special for the use of, reference to, or reliance on this white paper or any of the content contained herein, including, without limitation, any loss of business, revenues, profits, data, use, goodwill or other intangible losses.

You will find important legal information in section 6 of this white paper.

# Abstract

The AUREI token (ARE) is a digital currency designed to maximize the alignment of interests of developers and investors through the implementation of an original and innovative mechanism based on economic incentives. We believe this mechanism designed to run indefinitely is unparalleled in other crypto projects and in the financial sector in general.

In a few words, this mechanism ensures by its design the sane and solid structure of AUREI token (ARE). On the one hand, the developers are not entitled initially to receive any AUREI token (ARE), on the other hand, the developers will be entitled to receive new minted AUREI token (ARE) if and only if the value of tokens appreciate substantially from its initial phase.

It's a paradigm shift for the concept of token creation. Usually token creation dilutes former investors, here this effect is structurally different thanks to the token design: the price of the token must necessarily rise substantially for a new token issuance to take place. Thereby AUREI token (ARE) is, by design, a breakthrough innovation which defends, objectively and above all, the interests of investors.

To ensure the integrity of this mechanism, terms and conditions will be directly hard coded inside the AUREI's smart contract and safe-guards will be set up to prevent any and all deviation from this aim.

# 1. Context

## 1.1 Development of Blockchains and tokens

The adoption of Blockchain technology is not simply a temporary trend or fashion, but a firm and continuous shift towards a new paradigm: an easier, quicker and more transparent financial world based on mathematics, economics and computer science.

This adoption leads to new possibilities including the development of tokens: units of value that exist on a blockchain and can represent anything (e.g. a digital currency, a right to ac-

cess a service, ownership of a tangible or intangible asset, etc.). Tokens offer multiple benefits including the capability to program value.

Thanks to this possibility, we now have the ability to design new economic incentives that do not exist in conventional finance. Far from resting on what has been done so far in the crypto ecosystem, our team wants to push the limits: our goal is to develop a new economic incentive which is, by design, disruptive.

## 1.2 Design of a new economic incentive

The value of cryptocurrencies and tokens is determined by the market as most of them are quoted on exchange platforms to ensure liquidity to investors. Nevertheless, an important and increasing amount of cryptocurrencies and tokens have little to no liquidity. More importantly, there is a lack of value appreciation over time.

One of the reasons for this downturn is how these instruments are designed: the economic incentives of developers are not truly tied to those of investors beyond the initial stage which lead to slow down or death of projects.

In light of these elements, we decided to launch the AUREI project and create a new kind of token called AUREI token (ARE) backed by the Ethereum blockchain and designed as a breakthrough innovation. It is a revolution in the crypto world, breaking with older design of tokens in order to defend, above all, the interests of investors through a mechanism described in the following pages of the whitepaper.

## 2. AUREI Association

The Aurei Association is an association located in Switzerland. It was founded with a view to foster the AUREI project and gathers the developers and the financial sponsors of the project, relying on a lean management structure.

The AUREI token (ARE) architecture relies on certain intellectual property features that were initially designed and protected by the developers.

The Aurei Association enjoys access to the underlying intellectual property in the form of a perpetual, non-assignable and non-transferable license granted by the developers. In exchange, the developers shall benefit from the rights listed in section 3.1 below.

The developers have, and this in total agreement with Aurei Association as well as the financial sponsors, the full rights to use at their convenience their own concept and everything developed by them or with their assistance before or during the inception of the AUREI project, for other projects in which they could be involved either during or after the AUREI project.

All legal and technical steps initiated for the inception of the AUREI project were supported by the Aurei Association.

Initially, 50,000 AUREI tokens (ARE) will be issued and kept in reserve by Aurei Association. Neither the financial sponsors, nor the developers have any right on these tokens or the result of their sales which will stay inside the Aurei Association. These tokens will be gradually and slowly offered for sale on exchanges. In the case of termination/liquidation of the Aurei Association, any assets in the Aurei Association would be used to buy back AREs (and eventually other cryptocurrencies) on the markets. The Aurei Association would then burn all and any tokens in its possession (as a gift to the crypto community) just prior its own liquidation, increasing AREs scarcity to the benefit of its holders.

Neither the developers nor the Aurei Association, nor any of its members, directors, stakeholders, consultants, agents or professional advisers shall have any liability whatsoever towards holders of AREs.

# 3. Token Design

## 3.1 AUREI Presentation

AUREI token (ARE) will be issued using a smart contract that meets the requirement of the ERC-20 standard in order to be easily interoperable within the ecosystem (e.g. be listed on exchange platform, be used for payment, etc.). Initially, 50 000 tokens will be issued and kept in reserve by Aurei Association. These tokens will be gradually and slowly offered for sale on exchanges.

As we have said earlier, the value of cryptocurrencies and tokens is determined by the market through the use of exchange platforms. Our token is no exception to the rule. However, we hard-coded, inside the smart contract, an original and innovative mechanism to economically incentivize developers if and only if the token's value appreciates significantly, in line with the investors interests.

This mechanism could be simply explained as follows: every time the price of AUREI token (ARE) on exchanges reach a new level, 500 new tokens are minted and distributed equally among the addresses of the developers. A level can be defined as a certain price to reach in order to trigger the next minting process. The minting process related to a level can only be triggered once and only once. (cf. 4. Continuous Crowdsale Details)

The price of AUREI token (ARE) used to unlock a new level is determined using a price index which is an average price obtained by aggregating the prices of AREs quoted on different exchanges. This price index is fed to the smart contract using an oracle. (cf. 3.2 Implementation of an Oracle)

It is important to note that the number of levels is non-finite. This design choice was made on purpose to ensure that the developers are continuously economically incentivized over the long term.

Furthermore, from an investor's point of view, this mechanism has been designed to closely link token issuance and token performance. The minting process is indeed closely linked to the multiplication of the original price, valued in US dollars, of AUREI token (ARE). We believe this is unheard of in crypto and even in the financial ecosystem in general and that it will be to the greatest benefit of investors.

This unique and innovative concept creates a win-win situation from the short term to the very long term horizon. This concept will open a new path in token design for the future, based on a token issuance price function (price increase factor) instead of a token issuance time function (either initially or at a later stage during the life of the token).

In no event shall the developers, the Aurei Association, or any of its members, directors, stakeholders, consultants, agents or professional advisers shall have any liability whatsoever towards holders of AREs. In particular, there should be no expectation on the part of any holder of ARE that any work will be performed by the developers or the Aurei Association, or any of its members, directors, stakeholders, consultants, agents or professional advisers.

## 3.2 Implementation of an oracle

The use of an oracle is mandatory as smart contracts cannot access data outside the blockchain, such as a market price. Thereby, the oracle feeds the smart contract with external information (i.e. send a transaction when the token price reaches a new level) that will trigger the minting process.

In order to ensure that these new tokens are only created when the token price reach a certain level, the minting process is triggerable only by an oracle maintained by a sworn state official staking its reputation. To prevent misuse of the oracle, we have established safeguards: a double checking procedure is set up with three other actors.

Thereby, the oracle will be able to trigger the minting process, if and only if:

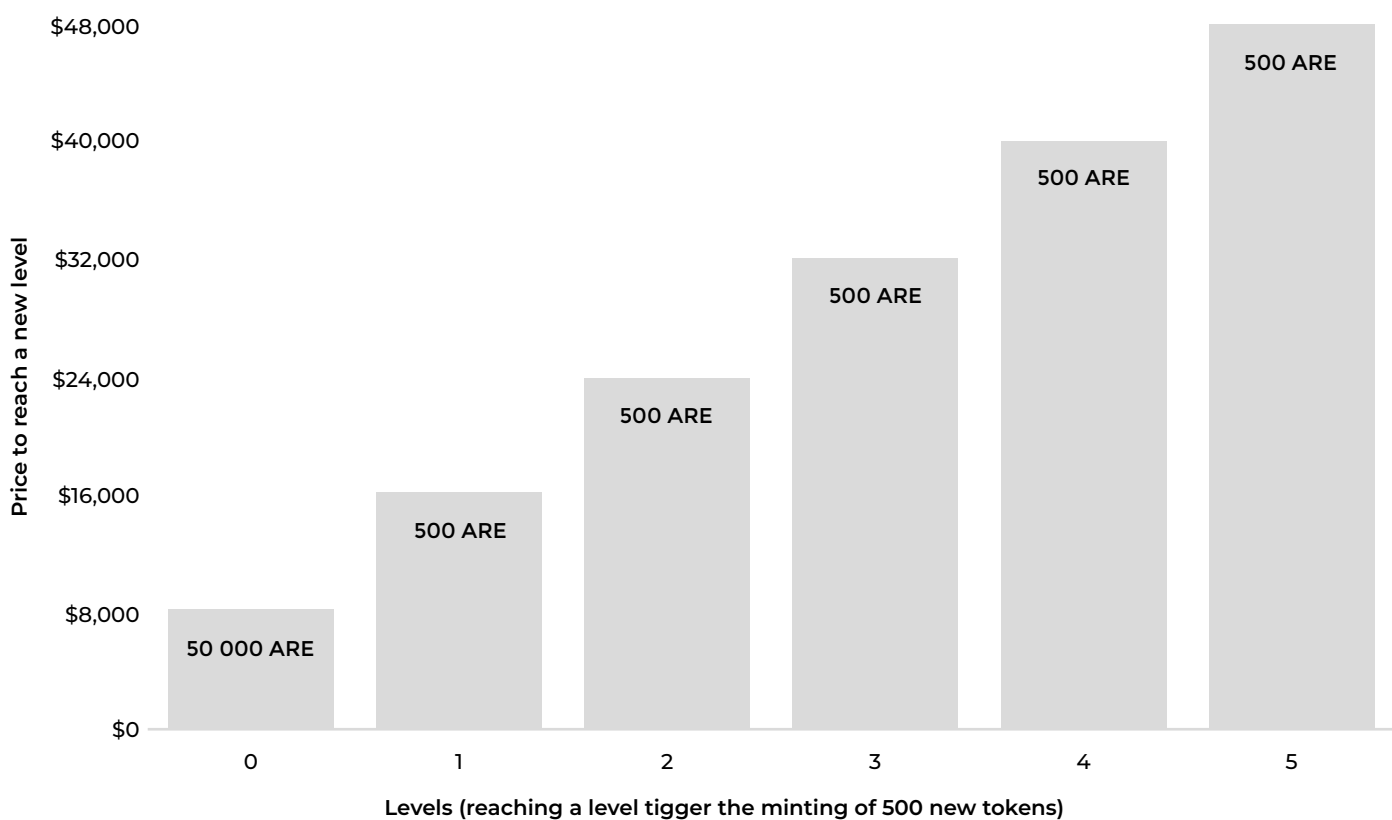

- the oracle as sworn state official,
- and,
- a minimum of two actors out of three in charge of the double-checking procedure, agree on the external information to be pushed to the smart contact.

# 4. Continuous Crowdsale Details

Before the Continuous Crowdsale, a private subscription is held for a single private investor. The price during the private subscription will be an AUREI token (ARE) for one bitcoin.

After the private subscription, the AUREI token (ARE) will be directly quoted on exchanges at a price to be determined at the time of the listing. The interval between two levels is \$8,000 as shown in the graph below.

The table below recapitulates levels for the minting of new tokens.

Level	Tokens Issuance	Total number of tokens issued	Price to reach to mint 500 new tokens	Comments
0	50 000	50 000		Minted at the deployment of the smart contract
1	500	50 500	\$16,000	When the price on exchanges (using a price index) reach a new level, the oracle feed the smart contract with this external information to trigger the minting process of 500 new tokens. The interval between two levels is \$8,000
2	500	51 000	\$24,000	Same comment as above
3	500	51 500	\$32,000	Same comment as above
4	500	52 000	\$40,000	Same comment as above
...				
9	500	54 500	\$80,000	Same comment as above
...				
99	500	99 500	\$800,000	Same comment as above
n	500	$50\,000 + n \cdot 500$	$(n+1) \cdot 8,000$	Same comment as above

As you may have noticed on the graph and the table above, developers will be incentivized for the first time when and only when the price of AUREI token (ARE) has roughly doubled from its original price (16,000\$ is the first level to reach). Which means that developers will only be rewarded if investors reap significant profits.

The code of the smart contract is publicly available at this address:

<https://etherscan.io/address/0x92afBa413BF9E5DA3919A522E371884bEAC76309>

# 5. Conclusion

The mechanism behind the AUREI token (ARE) is an original and innovative way to create a virtuous circle to promote the sane development of the project which is aligned with long-term interests of investors.

Regarding the issuance policy of tokens, the Aurei Association decided to issue 50 000 AUREI tokens (ARE) upfront. These tokens will be issued, kept in reserve and gradually offered for sale on exchanges. This practice is done in order to promote the scarcity of the token which is a determining factor to create momentum around the token and is in the best interest of investors.

Furthermore, as shown in the graph appearing in section 4, the Aurei Association has decided to issue only 500 new tokens for the developers per level to have as little a dilutive effect on investors as possible. This is the only mechanism, designed to run indefinitely, in place to economically incentivize the developers over the long term.

Aurei Association will act accordingly, if necessary, to keep an acceptable level of dilution at any new level reached, including the request of part of these new tokens to be burnt.

As said above, this mechanism is a breakthrough innovation that will open a new path in token design for the future, based on a token issuance price function (price increase factor) instead of a token issuance time function (either initially or at a later stage during the life of the token).

# 6. Legal

This document does not constitute an offer or an invitation to sell shares, securities or rights belonging to Aurei Association or any related or associated entity.

As described more in detail in section 6.1 below, an ARE is not a security. It is a crypto- currency that qualifies as a payment token as defined by the FINMA in its guidelines for enquiries regarding the regulatory framework for initial coin offerings, as published on 16 February 2018.

The Aurei Association does not act as a derivative provider within the meaning of Article 3 paragraph 3 of the Stock Exchange Ordinance (*Ordonnance sur les bourses et le commerce des valeurs mobilières – OBVM, 2 December 1996*).

The Aurei system is not a market within the meaning of the Financial Market Infrastructure Act -FMIA (*Loi fédérale sur les infrastructures des marchés financiers et le comportement sur le marché en matière de négociation de valeurs mobilières et de dérivés – LIMF, 19 June 2015*)

None of the information or analyses described in this document is intended to provide a basis for an investment decision, and no specific investment recommendation is made. Accordingly, this document does not constitute investment advice or an invitation to invest in any security or financial instrument of any nature whatsoever.

This document does not constitute or form part of, and should not be construed as, an offer for a sale or subscription, or an invitation to buy or subscribe securities or financial instruments. This document, or any of its component parts, does not constitute the basis for, or should not be used as a basis for, or in connection with, a contract for the sale of securities or financial instruments or a commitment to sell securities or financial instruments of any kind.

Aurei Association expressly disclaims any liability for any direct or indirect loss or damage of any kind arising directly or indirectly from:

- (i) any reliance on the information contained in this document;
- (ii) any error, omission or inaccuracy in said information; or
- (iii) any resulting action that may be brought.

Aurei Association may not be held responsible for any tax or charges a buyer of ARE may have the obligation to pay in its residing country with respect to the purchase, ownership or sell of an ARE.

Neither the developers nor the Aurei Association, nor any of its members, directors, stakeholders, consultants, agents or professional advisers shall have any liability whatsoever towards holders of AREs. In particular, there should be no expectation on the part of any holder of ARE that any work will be performed by the developers or the Aurei Association, or any of its members, directors, stakeholders, consultants, agents or professional advisers.

## 6.1 Nature of AREs

### **An ARE does not represent an investment**

In a security or a financial instrument within the meaning of FMIA and EU Directive 2014/65/EU of the European Parliament and of the Council of 15 May 2014 relating to markets in financial instruments: AREs confer no direct or indirect right to Aurei Association's capital or income, nor does it confer any governance right within Aurei Association.

### **An ARE is not proof of ownership or a right of control**

Control over an ARE does not grant the controlling individual any asset or share in Aurei Association. An ARE does not grant any right to participate in control over Aurei Association.

### **ARE is not an electronic currency**

Within the meaning of EU Directive 2009/110/EC of the European Parliament and of the Council of 16 September 2009 relating to access to and pursuit of the business of electronic currency institutions: AREs do not represent a claim on the issuer which is issued on receipt of funds for the purpose of making payment transactions and AREs are not accepted outside the Aurei system.

### **ARE is not a payment service**

Within the meaning of EU Directive 2007/64/EC of 13 November 2007 relating to payment services in the internal market, nor within the meaning of EU Directive N° 2015/2366 of the European Parliament and of the Council of 25 November 2015 relating to payment service 2 (DSP 2): Aurei Association's business does not consist in receiving currencies against the delivery of AREs; as such, an ARE is not a means of payment either.

### **ARE is a cryptographic token used by the Aurei system.**

An ARE is a crypto-currency, i.e. an unregulated, digital asset, designed by its developers and issued by the Aurei Association and used and accepted by the members of a given community. It qualifies as a payment token as defined by the FINMA in its guidelines for enquiries regarding the regulatory framework for initial coin offerings, as published on 16 February 2018.

## 6.2 Risk factors

Acquiring ARE and storing them involves various risks. Therefore, and prior to acquiring AREs, any user should carefully consider the risks, costs and benefits of acquiring AREs in the context of the crowdsale and obtain any independent advice in this regard.

Any interested person who is not in the position to accept or to understand the risks associated with following risks must not acquire AREs. By purchasing, holding and using AREs, you expressly acknowledge and assume the following risks:

### **Risks Associated With the Ethereum Protocol**

AREs are based on the Ethereum protocol. Therefore, any malfunction, unplanned function or unexpected operation of the Ethereum protocol may cause AREs to malfunction or operate in a way that is not expected. Ether, the native Ethereum Protocol account unit, may itself lose value in a similar way to AREs, and also in other ways.

For more information on the Ethereum protocol, see <http://www.ethereum.org>

### **Risks associated with the buyer's credentials**

Any third party that obtains access to the buyer's credentials or private keys may be able to use the buyer's AREs. To minimize this risk, buyers must protect themselves against people gaining unauthorized access to their electronic devices.

### **Legal risk and risk of adverse regulatory intervention in one or more jurisdictions**

The operation of AREs may be impacted by the passing of restrictive laws, the publication of restrictive or negative opinions, the issuing of injunctions by national regulators, the initiation of regulatory actions or investigations, including but not limited to restrictions on the use or ownership of digital tokens such as AREs, which may prevent or limit development of the AUREI project.

Given the lack of crypto-currency qualifications in most countries, each buyer is strongly advised to carry out a legal and tax analysis concerning the purchase and ownership of AREs according to their nationality and place of residence.

### **Risk of theft and piracy**

Hackers or other malicious or criminal groups or organizations may attempt to interfere with the availability of AREs in several ways including, but not limited to, denial of service attacks, Sybil attacks, mystification, surfing, malware attacks, or consensus-based attacks.

## **Risk of security weaknesses in the AUREI system's core infrastructure software**

The AUREI core software is based on open source software. There is a risk that the Aurei Association team, or other third parties, may intentionally or unintentionally introduce weaknesses or bugs into the core infrastructure elements of the AUREI system, by interfering with the use of, or causing loss of, AREs.

## **Risk of weakness or exploitable breakthrough in the field of cryptography**

Advances in cryptography, or technical advances such as the development of quantum computers, may present risks for crypto-currencies, which could result in the theft or loss of AREs.

## **Risk of a ARE mining attack**

As with other decentralized cryptographic tokens and crypto-currencies, the blockchain used for the AUREI system is vulnerable to mining attacks, including but not limited to, dual-expense attacks, powerful mining attacks, selfish mining attacks, and critical competition attacks. Any successful attack poses a risk to the AUREI system, the expected performance and sequencing of markets, and the expected performance and sequencing of Ethereum contract calculations. Despite the best efforts of the Aurei Association team, the risk of known or new mining attacks exists.

## **Risk of a Tight Market for AREs**

There are currently no exchanges or trading facilities on which AREs can be traded. If such exchanges or trading facilities do develop, they will probably be relatively new and subject to poorly understood regulatory oversight. They may therefore be more vulnerable to fraud and default than the established and regulated exchanges that exist for other products. Should exchanges or trading facilities that represent a substantial part of the ARE trading volume be involved in fraud, security failures or other operational problems, the failures of such exchanges or trading facilities may limit the ARE value or liquidity.

## **Risk of an Uninsured Loss**

Unlike bank accounts or accounts in other regulated financial institutions, funds held through the Ethereum network are generally uninsured. At present, there are no public or private insurance agents providing buyers with coverage against a loss of AREs or a loss of value.

## **Risk of winding-up of the Aurei Association project**

For a number of reasons including, but not limited to, an unfavorable fluctuation in Bitcoin value, an unfavorable fluctuation in ARE value, the failure of business relationships or competing intellectual property claims, the Aurei Association project may no longer be a viable activity and may be dissolved or simply not launched and the ARE may have no value.

## Unforeseen risks

Crypto-currencies and cryptographic tokens are a new, untested technology. In addition to the risks stipulated above, there are other risks that the Aurei Association team cannot predict. Risks may also occur as unanticipated combinations or as changes in the risks stipulated herein.

## 6.3 Governing law and arbitration

Any dispute or controversy arising from or under the crowdsale shall be resolved by arbitration in accordance with the Swiss Rules of International Arbitration of the Swiss Chamber of Commerce in force on the date when the Notice of Arbitration is submitted in accordance with these Rules. The arbitration panel shall consist of one arbitrator only. The seat of the arbitration shall be Lugano, Switzerland. The arbitral proceedings shall be conducted in English.
