Overview

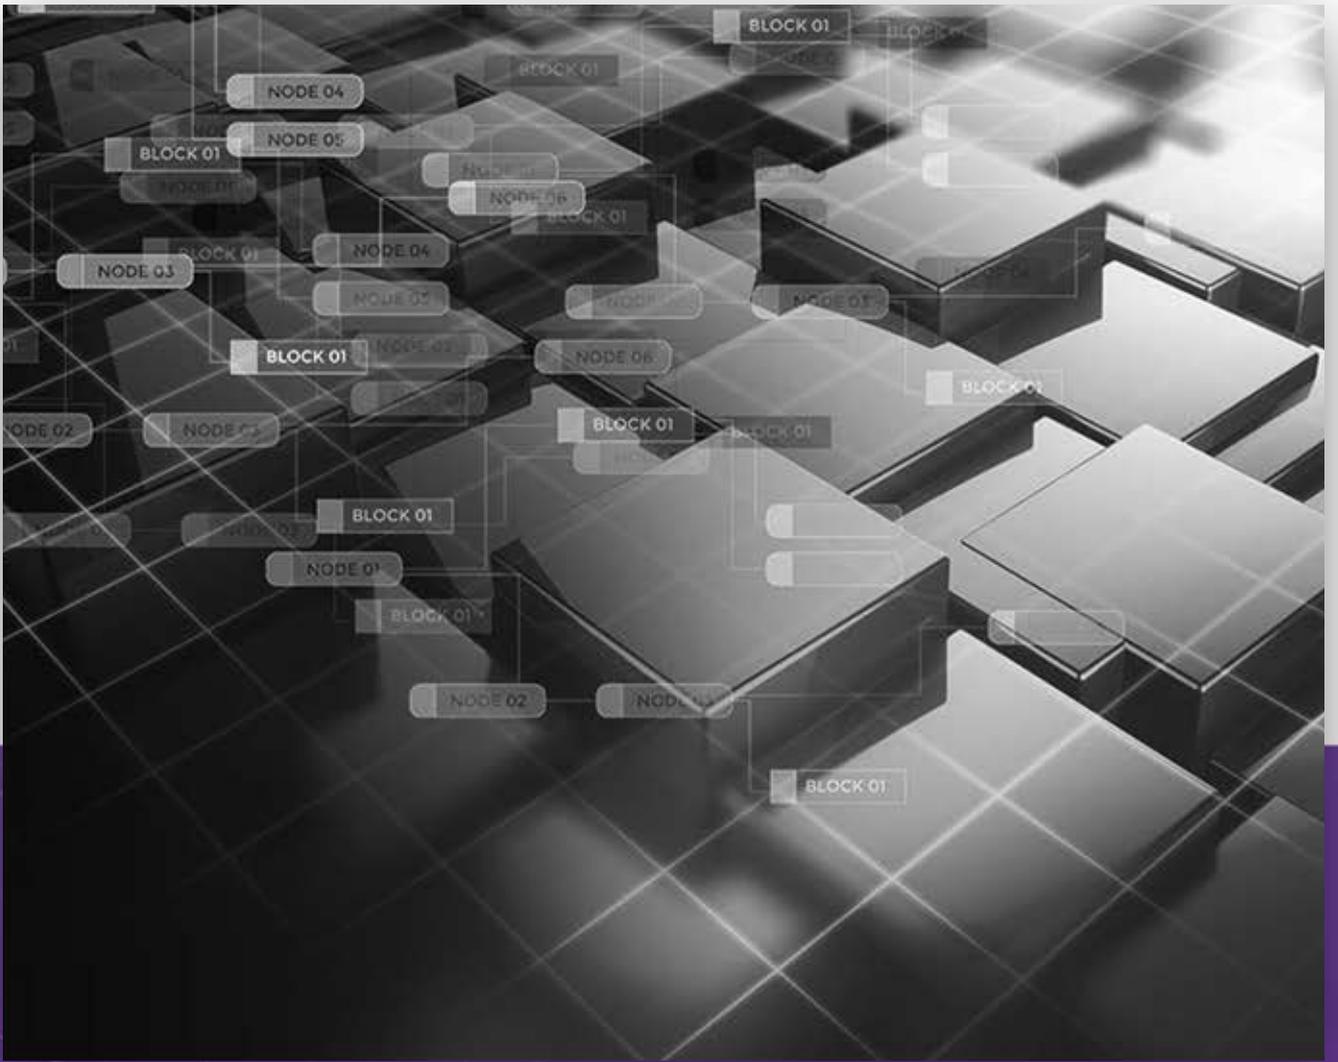

ImpulseVen is an all-round DeFi ecosystem that offers a range of DeFi solutions in one package. Built on the Ethereum blockchain and powered by ERC20 VEN token, the platform is on a mission to make DeFi solutions accessible to all by offering an easy-to-use platform with highest standards of transparency, security and reliability. It also simplifies monetary transactions by offering an alternative to expensive middlemen and third-party intermediaries.

The DApps offered on the platform includes a state-of-the art decentralized exchange, AI-based arbitrage trading bot, lending platform, decentralized recurring billing, yield farming and staking rewards, and more.

01.

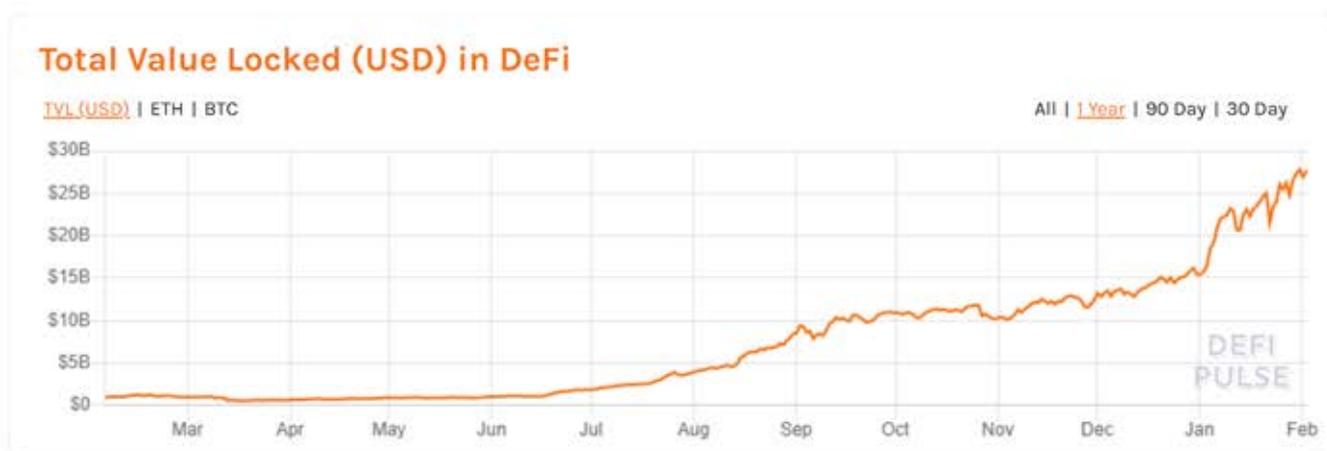

DeFi Trends

CONTENT

▶
02.

Ever since Bitcoin, the first cryptocurrency appeared on the horizon in 2008, it has challenged the traditional financial sector by offering the kind of benefits that were unthinkable at that time, and at a fraction of the cost. In a decade's time, the cryptocurrency revolution has evolved to create a whole new financial technology segment called Decentralized Finance or DeFi in short.

In the present day, DeFi projects have occupied a prominent place in the financial system mainly due to their ability to provide a host of financial services to everyone, while maintaining a very low barrier to entry. In fact, DeFi solutions are expected to improve the situation of "unbankedness" prevailing in the world where an estimated 1.7 billion adults were found to have no access to banking and financial services. However, the major focus of most DeFi projects at the moment remains on P2P Lending, Decentralized Trading, Asset Tokenization, Payments and also Prediction Markets to an extent.

Total value locked in DeFi (Source: DeFi Pulse)

By the end of 2019, the rising interest in the space resulted in over 3 million ETH being locked up in various emerging DeFi protocols, which translates to about 1 out of every 37 ETH in circulation. According to reports, the total USD value locked in DeFi protocols in 2020 stands at around USD 15 billion which

represents a huge growth compared to USD 660 million during the same time in the previous year and USD 290 million in the year before.

The ImpulseVen project realizes the need for expanding the practical use cases for DeFi to cater to a much wider audience, solving real-world challenges plaguing the global population. In order to materialize its vision, the project has started building the basic underlying infrastructure like a decentralized exchange (DEX), advanced trading and lending solutions.

A snapshot of the prevailing DeFi trends demonstrates that the sector is a viable alternative to traditional finance and is likely to go from representing less than 1% of the market to commanding a significant share over the course of next 5-10 years.

ImpulseVen has the potential to capture a huge chunk of the DeFi space, allowing it to cater to the diverse needs of not just the cryptocurrency community, but also the general population. By creating a simple yet powerful DeFi solution that appeals to the masses, ImpulseVen can easily fulfill its mission to become the go-to DeFi protocol for everything related to staking, swaps, smart locks, lending and payment solutions. If it manages to maintain the momentum, the project could potentially capture at least 80% of the market, making it a leading DeFi solution.

ImpulseVen as DeFi

CONTENT

Until the dawn of DeFi, all financial transactions across the globe were forced to go through centralized custodial service providers, which in other words were banking and financial institutions. The involvement of these institutions was inevitable due to the counter-party risk (a risk where the asset may not be received after it is being paid for) that exists while funds and/or other valuable assets are changing hands. While this mechanism continues to be relevant,

increasing use of cryptocurrencies with their underlying blockchain and smart contracts provides the ability to conduct trustless transactions, thereby making the legacy systems more of an option than a compulsory requirement. The DeFi solutions like ImpulseVen, embodies these advantages provided by blockchain and decentralized ledger technology. Hence extending its application and promote widespread adoption of trustless mechanisms to conduct even the most complex transactions without middlemen or the risk of being held hostage by a third-party institution.

The risks of having third-party involvement in transactions is not only limited to traditional finance but has been prevalent in the crypto industry as well, in the form of centralized exchanges and trading platforms.

ImpulseVen is a DeFi solution built over the tried and trusted Ethereum protocol. It is powered by VEN, a native ERC20 token that plays a crucial role in conducting business within the ImpulseVen ecosystem. The products and services offered by the ImpulseVen ecosystem is based on a strong foundation formed by its decentralized exchange platform. The ImpulseVen DEX allows non-custodial, cross-chain peer-to-peer transactions with the help of smart contracts – a capability that forms the basis of all DeFi applications, including the 7 different services offered on ImpulseVen.

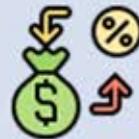

To ensure inclusive accessibility to everyone irrespective of their prior experience with cryptocurrencies or related products and services, ImpulseVen implements an intuitive, user-friendly interface in all of its products. It is a crucial differentiating factor that makes it stand apart from the rest of the DeFi solutions that uses barebones, complex interface that could overwhelm newcomers. Users will be able to access all offerings within the ImpulseVen ecosystem through a single dashboard with customization features.

The ImpulseVen DEX

CONTENT

The ImpulseVen DEX is a fourth-generation exchange platform with advanced orderbook model supporting derivatives as well as other trading needs. Exchange of crypto assets on ImpulseVen DEX is governed by a smart contract accessing as an escrow that concludes every transaction only after all the requirements to eliminate counterparty risk is satisfied. It supports staking, a hallmark of investment potential in a DeFi ecosystem where users can lock their tokens to provide liquidity and earn the resulting compounding value in the form of interest or staking rewards.

4.1

Features of ImpulseVen DEX

- ▶ At first glance, the ImpulseVen DEX features an easy-to-use interface on which users can trade spot swaps, and futures in a permissionless fashion.
- ▶ For added reliability and execution speed, the platform implements an off-chain orderbook model where orders are matched before they are committed to the blockchain for execution and settlement.
- ▶ ImpulseVen DEX orderbooks are maintained on ImpulseVen chain nodes, ensuring maximum decentralization and censorship resistance so that all transactions happening on the platform are completely transparent.

- ▶ Implementation of Trade Execution Coordinators (TEC) increases reliability by enforcing price-time priority for all order executions while eliminating collisions and front running possibility. The TECs combines the best of Order Matching and Open Orderbook Relay models to make trading more flexible, ensure liquidity, manage minimum spread and reduce fees.
- ▶ ImpulseVen DEX is designed to be a constantly evolving platform through democratization of trading. On the platform, users will have the capability to add new derivative pairs for crypto assets and based on the demand for such a pair among the community, it could become a permanent offering.
- ▶ In-built ERC20 swap mechanism for traders to switch between assets on-the-fly to trade the desired derivative pair.
- ▶ Support for decentralized futures trading
- ▶ 20X leverage on-chain perpetual contracts with transparent fees and 24/7 guaranteed liquidity
- ▶ ImpulseVen Perpetual Protocol supports perpetual contracts for any asset including DeFi tokens like WBTC, YFDAI and VEN
- ▶ Zero fees for the first 3 months after launch.

Yield Farming and Staking Rewards

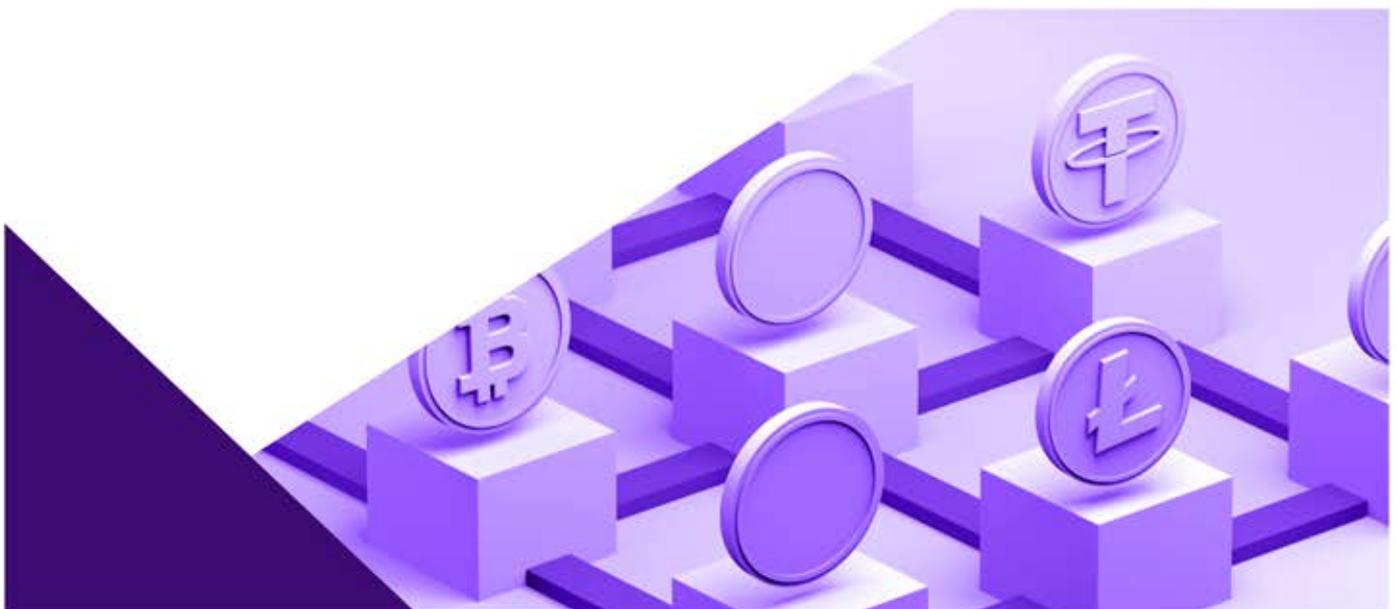

CONTENT

Yield Farming, also known as Liquidity Mining, is considered as an opportunity to earn passive income for those holding cryptocurrencies. Made popular by few DeFi applications, Yield Farming involves crypto holders depositing their assets into a liquidity pool – a smart contract for holding funds. By doing so, the investor will be providing capital to the platform and in turn will receive rewards in the form of tokens. Depending on the rules, the investor can choose to withdraw their initial capital at anytime or after a fixed duration.

ImpulseVen implements a flexible Yield Farming program that offers attractive annual percentage yields in the form of VEN tokens. The liquidity secured through Yield Farming will be instrumental in helping the project further strengthen its DeFi offering. The list of supported assets for yield farming will be announced soon.

ImpulseVen also supports staking of its native VEN tokens on its website. The staking mechanism on the platform is designed to offer 80% of fees generated from all VEN transactions as dividends, to be shared between all the stakers. These dividends start accumulating the moment VEN tokens are staked, and payout of dividends is made once every 3 days. The dividend earned will be added to the stake, thereby gradually increasing the amount of staked VEN tokens.

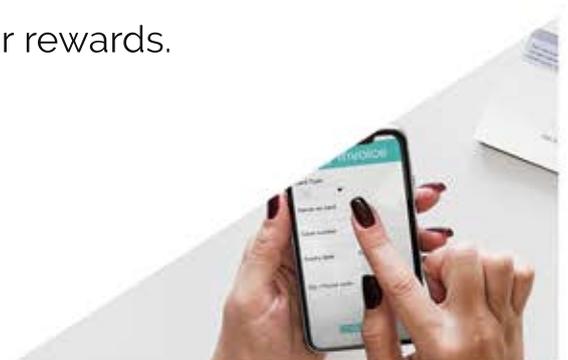

Lending on ImpulseVen

CONTENT

Lending features high on the list of DeFi applications. Also known as Open Finance, it plays an important role in providing liquidity to individuals as well as businesses, against crypto assets as collateral. Compared to traditional banking where the user will have to go through an endless process of documentation and prove their creditworthiness, DeFi loans are much simpler. The borrower just needs to express their intent to borrow in fiat or stablecoins and deposit collateral in any of the accepted cryptocurrencies against which they will be issued a loan at attractive interest rates. The liquidity for lending is generally provided by other participants in the network who will deposit their funds into a lending pool, which is governed by a smart contract. By contributing towards the lending pool, the investors stand to earn interest on their deposits. Meanwhile, smart contracts governing the lending process, will implement failsafes to eliminate the risk of default or a drastic fall in the value of collateral by either requiring the borrower to provide additional collateral or through liquidation of the collateral when its value falls below a certain price. Similarly, an increase in value of crypto assets held as collateral makes the borrower eligible for additional loans against the existing collateral. The ImpulseVen Lending platform is a decentralized solution that is open for individuals and businesses alike. Users can borrow in stablecoins over the platform after depositing a variety of crypto assets as collateral. The platform intends to offer added convenience to the borrowers, by charging minimal interest rates. On ImpulseVen's Lending platform, borrowers can also acquire secure coins on loan and earn passive interest in the form of VEN token variants. Meanwhile, investors involved in staking or contributing tokens towards the lending pool also earn stablecoins as interest or rewards.

Decentralized Recurring Billing

CONTENT

A relatively new application, Decentralized Recurring Billing feature, is a welcome addition to the list of DeFi solutions, as more and more businesses have started accepting crypto payments. The feature allows users to automatically transfer a fixed amount of cryptocurrency from one wallet to another at regular intervals with the help of smart contracts. Decentralized Recurring Billing is ideal for managing subscription of products and services. It can also prove to be a valuable tool to manage investment portfolios that include crypto SIPs (Systematic Investment Plans), recurring deposits and more.

The Decentralized Recurring Billing solution on ImpulseVen implements a flexible smart contract which is designed to efficiently carry our payment distribution and bill collection based on digital signature dynamics of various accounts. This feature can prove to be immensely helpful, especially when used with stablecoins. They exhibit negligible volatility, thereby helping users automate a task without having to worry about disruption of services due to non-payment of dues.

Arbitrage Trading Bots

CONTENT

Positioned as one of the important products of the ImpulseVen ecosystem, the Arbitrage Trading Bots using artificial intelligence will be able to leverage on varying prices of crypto assets across different decentralized exchanges, to execute profitable cross platform trades. While the principles behind arbitrage trading is not new and there are numerous trading bots currently available in the market, there are very few, if any so far that work in a decentralized setting.

The Arbitrage Trading Bot will monitor different decentralized exchanges to identify price discrepancies for a particular token pair and capitalize on such discrepancy by placing profitable trades. By doing so, it will generate quick profits for the trader which will then be deposited directly into their accounts. In case the ImpulseVen Arbitrage Trading Bot is working with funds from an investment pool, then the profits generated by such activity will be proportionally shared with each investor as per their percentage contribution to the pool.

The ImpulseVen Arbitrage Trading Bot will be powered by a smart contract capable of reading the blockchain from multiple exchanges, identifying the potential to place profitable orders. Once identified it will execute trades synchronously one after another until the conditions change. As soon as the gap between asset prices on different exchanges close, the smart contract will stop placing orders. The node application responsible for monitoring and execution of trades, will be hosted on a cloud centralized server and connected to different decentralized exchanges using their respective API keys. The bot will be configured for high throughput, capable of executing thousands of transactions per second to ensure maximum utilization of presented opportunity simultaneously across multiple exchanges.

In order to start using the ImpulseVen Arbitrage Trading Bot, users will just have to sign up, deposit funds in the cryptocurrency that they wish to trade and hit the start button. The straightforward sign-up process will require them to enter their email, set login credentials and verify the provided email address. From there onwards, the bot will do all the heavy lifting and the profits made during the process will be deposited to the user's account.

Governance

CONTENT

Decentralization is the tenet of a DeFi solution, meaning there is no central authority or person governing the operations of the platform. Instead, it is managed through a democratic process facilitated by a mechanism called "Decentralized Autonomous Organization" or DAO. Used in the context of decentralized protocols, a DAO comprises a group of users, generally tokenholders, who interact with each other within the confines of a set of programmed rules, on a smart contract to ensure smooth functioning of the protocol. The participants in the DAO work towards the betterment of the ecosystem by setting community goals and targets through proposals. The eligible participants will then vote on these proposals to reach a consensus, ultimately resulting in a decision on whether to implement the said proposal or not.

The functioning of a DAO is akin to that of a company or a corporation where shareholders with voting rights signify tokenholders with the privilege to vote. In case of ImpulseVen, the ecosystem's native VEN token acts as a governance token representing a share in the project, which also translates to voting rights with incentives. The VEN token is transferable and can also be traded against other tokens.

VEN Token

CONTENT

The utility as well as governance token of the ImpulseVen ecosystem VEN is a ERC20 token based on the Ethereum protocol. With a maximum supply of 10 million, VEN will be available for purchase during the token presale, followed by a public sale. Once staking and liquidity farming is launched, participants will be able to acquire the token as rewards for their contributions towards the ecosystem. It will also be the preferred mode of payment for products and services available within the ImpulseVen ecosystem.

10.1. Tokenomics

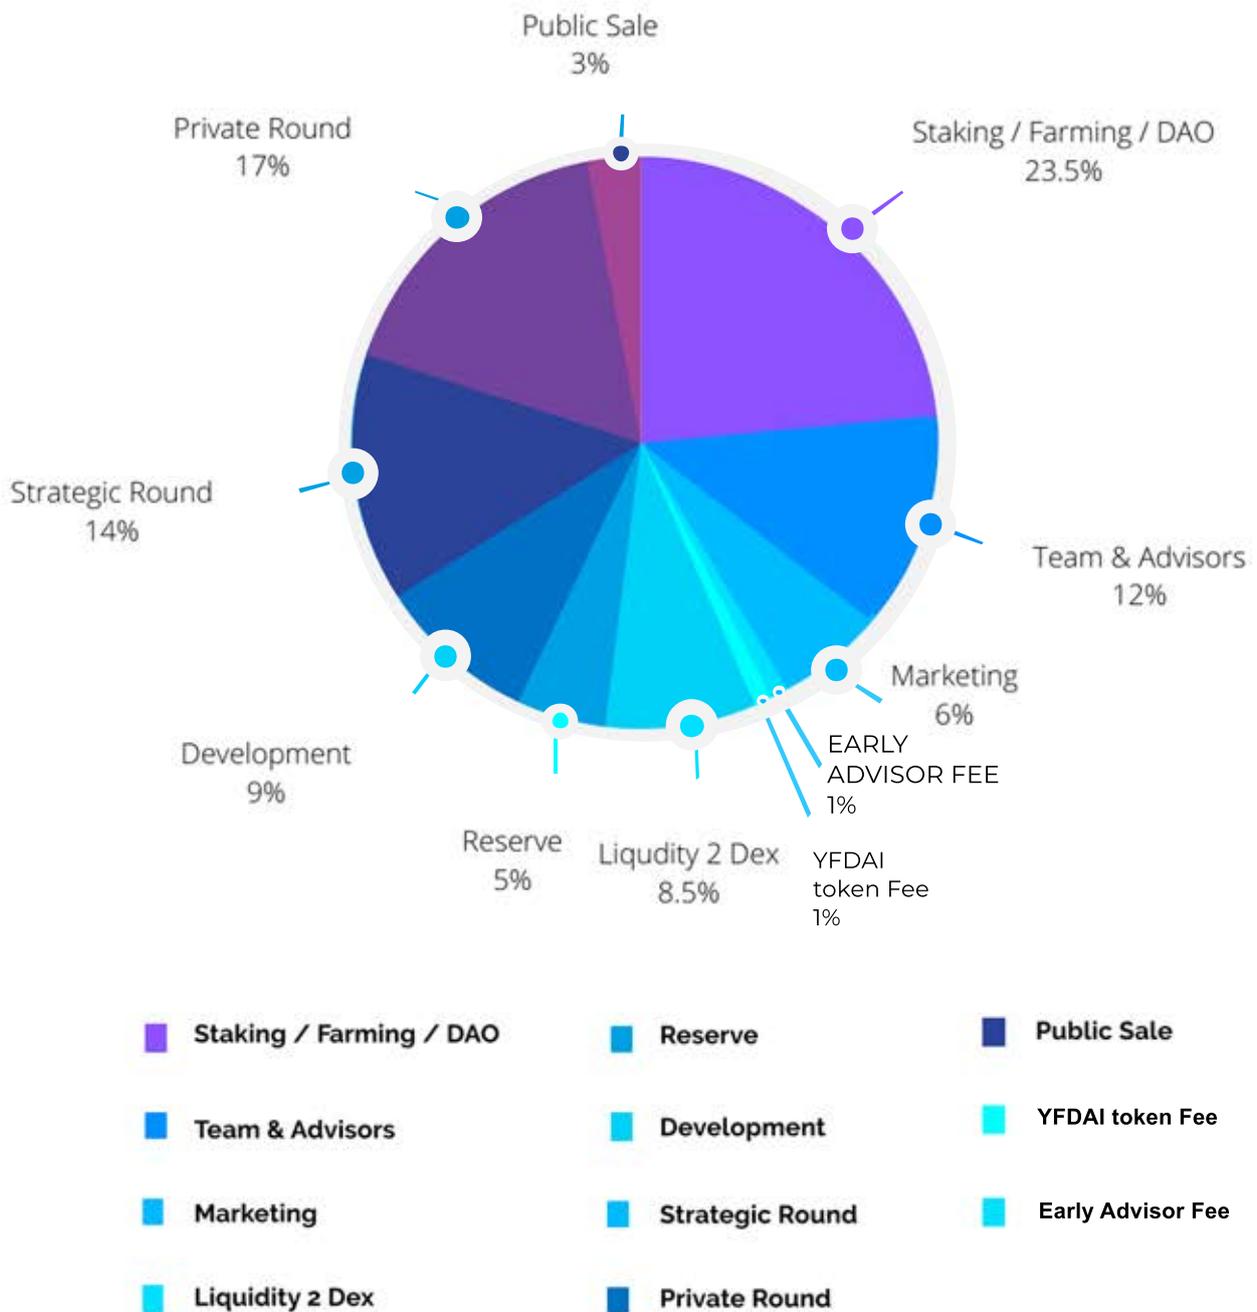

TOKEN ALLOCATION	PERCENTAGE	NUMBER OF TOKEN ALLOCATED
Strategic Round	14.00%	1,400,000
Private Round	17.00%	1,700,000
Public Sale	3.00%	300,000
Staking / Farming / DAO	23.50%	2,350,000
Team & Advisors	12.00%	1,200,000
Marketing	6.00%	600,000
YFDAI Token Fee	1.00%	100,000
Early Advisor Fee	1.00%	100,000
Liquidity 2 Dex	8.50%	850,000
Reserve	5.00%	500,000
Development	9.00%	900,000
TOTAL		10,000,000

Participants in the presale will be able to acquire VEN against ETH payment to a smart contract, whose address will be published on a later date. Alternatively, VEN will also be available for purchase on Uniswap platform.

The VEN presale will be followed by a public sale, where tokens leftover from the presale will be available for purchase. Meanwhile, all tokens procured before will remain locked until the conclusion of Public sale, following which it can be freely traded on the market.

Supported Wallets

CONTENT

Being a ERC20 token based on the Ethereum protocol, the VEN token is compatible with any DApp supported browser wallets like MetaMask, MEW Wallet etc. ImpulseVen is also in the process of creating its own ETH/ERC20 tokens compatible wallet application. The VEN wallet will also offer users access to other DeFi functions like staking and token swaps.

Transparency and Security

CONTENT

The ImpulseVen project is designed to empower its users by leveraging the potential of DeFi and its underlying blockchain technology to create solutions that are accessible to all, irrespective of their geographic location, occupation, earnings, etc. The ImpulseVen DeFi ecosystem embodies the essence of cryptocurrencies and blockchain technology to ensure the highest levels of transparency. All smart contracts as well as transactions handled by the ecosystem can be readily verified on the Ethereum block explorers like Etherscan.

Apart from transparency, security is a critical element. ImpulseVen follows all the available best practices to ensure the security of its codebase, smart contracts, wallets and modules that are part of the DeFi ecosystem. In addition, without leaving anything to chance, all ImpulseVen infrastructure will be subjected to internal as well as external security audits for verification and assurance.

Team

CONTENT

AMIT DEBNATH

LEAD DEVELOPER

With an innate love of writing code to solve complex issues, software developer Amit Debnath has been programming since 2016. Fluent in a variety of computer languages, he has taken the initiative to build user-friendly easy-to-use cryptocurrency platforms which can be readily used by anyone irrespective of their experience in handling cryptocurrencies. As a Senior Programmer with experience managing multiples projects at any given time, he has a strong understanding of the user requirements and plays the role of a leader by setting objectives for new developments. An excellent team player, Amit is developing the ImpulseVen project with his team.

Cora Ng-Korimbocus

Chief Operating Officer at ImpulseVen

Joining ImpulseVen as the COO, Cora brings in over 20 years of experience in management and communications to the project. She holds management positions in several key companies in Mauritius and has efficiently managed both domestic and international brands. As a project in the DeFi space, ImpulseVen will benefit from her previous experience at the Financial Services Promotion Agency (FSPA) and the Tender Committee. She is also an entrepreneur credited for founding CommunicationC! - a communication agency that offers Brand and Communication Development consulting for prominent companies.

With Brand and Integrated Communications as her forte, Cora will play a crucial role in shaping the success of ImpulseVen by building a strong community and user base. Her credentials as a certified trainer as well as a pro-active social worker will further empower the ImpulseVen team and help the project reach those who do not have access to financial services to benefit from the DeFi revolution.

Benito Elisa

Chief Financial Advisor to ImpulseVen

Guiding the ImpulseVen project to emerge as one of the top DeFi projects capable of solving the problems faced by conventional financial sector is Benito Elisa. A well-known name in the banking and financial sector, Benito Elisa is the founder of some of the prominent projects like Wakanda 4.0, Holo Pub, Tradehood Ltd., Benito Fintech News and more. As the Chief Financial Advisor, Benito is sharing his valuable experience to help the developers of ImpulseVen create a holistic platform that suits the most diverse needs of all the users irrespective of their past experience with alternative financial instruments and platforms.

Benito is also an official representative of the Mauritius Blockchain Conference and has earlier served as the Advisor in Financial Services to the Ministry of Financial Services and Good Governance, among others.

Krystelle Galano

Chief Partnership Officer at ImpulseVen

Responsible for forging partnerships with crypto companies, financial institutions, and community groups, Krystelle is a Marketing, Public Relations, and Investor Relations specialist. She has been an advisor for multiple crypto projects including a DEX. A member of the Union of Crypto Advisors, she also has over half a decade experience in social media management ecommerce operations.

MUZAMIL

Marketing Advisor

With over 10 years of events management experience, Muzamil uses his trademark skills of problem solving, creativity, and flexibility to help clients produce corporate events and meetings. He excels at logistics and operations, and his attention to detail means that events and meetings go smoothly from concept to completion. Projects count on Muzamil to handle any aspect of any size event. He creates a dynamic online registration platforms, keeps event teams on time and within budget, markets events, handles communications with attendees, and manages all details onsite for seamless execution. Muzamil has organized some of the biggest Blockchain & cryptocurrency events in the Middle East, Africa and Asia. In Impulseven, He will be responsible for organizing webinars, conferences and responsible for partnerships.

Roadmap

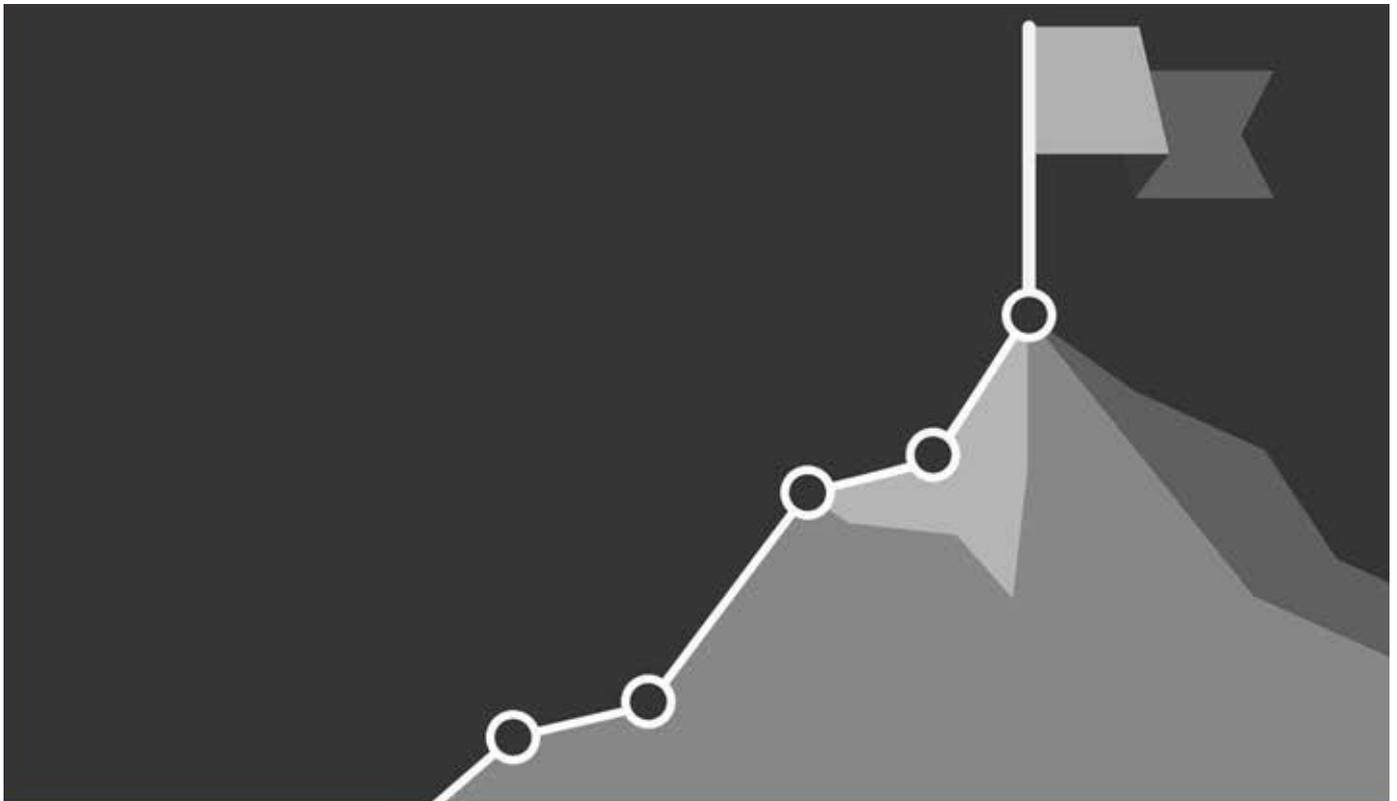

CONTENT

ImpulseVen has created a detailed roadmap for its DeFi project starting from ideation, research to development, deployment and marketing. Backed by a highly competent team, the ImpulseVen project has so far followed the roadmap with respect to all the deliverables. The team intends to continue this til the governance system takes over.

Compared to other DeFi projects, ImpulseVen has a rapid development plan that enables it to create a fully secure, working product within a 15-month duration. In addition, those acquiring the platform's native VEN token on launch can start earning rewards through Staking and Yield Farming during the same quarter.

Apart from the development milestones mentioned in the roadmap, the team will also be creating other products and services necessary to add value to the ImpulseVen DeFi ecosystem.

Q4 2020

- * Whitepaper V1.0 Launch
- * Website Launch

Q2 2021

- * ImpulseVen Wallet Launch
- * DAO Launch
- * IMPULSEVEN NFT
- * Lending & Borrowing Platform Launch

Q4 2021

- * IMPULSEVEN DEX Launch
- * Major Partnership
- * The DAO will take Decision what we should do in future

Q3 2020

- * Planning Market Research Started
- * Contract Development

Q1 2021

- * Smart Contract Developed
- * Presale
- * VEN Token Launch
- * CMC & Coingecko listing
- * Staking Platform Launch
- * Farming Platform Launch
- * CEX Listing
- * Marketing Commences
- * Partnership Announcement

Q3 2021

- * Decentralised Derivative Exchange Platform
- * Further Exchange Listing
- * AI Bot Launch

Marketing Strategy

CONTENT

During the initial stages, the platform will rely heavily on tried and tested marketing strategies across various digital channels. The carefully tailored marketing campaign will be launched on cryptocurrency and social media channels, targeting the existing crypto community members. Gradually, the target audience for promotional campaigns will be expanded to include everyone in general.

Apart from paid, owned and earned digital media strategy, the project will also create easy to understand educational material explaining DeFi and how one can benefit from ImpulseVen. It will be followed by tutorials with step-by-step instructions for using various features offered by the platform.

15.1. Community Building and User Engagement

One of the important steps to ensure the success of any DeFi project is to build and sustain a strong community. The best way to create a community for the project is by targeting those who are already familiar with cryptocurrencies and its usage. Most of the crypto community members are tech-savvy and are already part of various existing online communities on social media platforms.

Dedicated crypto related forums like BitcoinTalk, channels on Reddit, Steemit, and Telegram groups are also the best places to reach out and interact with the target audience. Crypto news websites and platforms like CoinMarketCap, CoinGecko, dedicated DeFi listing platforms like DeFi Pulse, DeFi Prime etc., will also increase the visibility of an emerging DeFi project like ImpulseVen.

As a part of its marketing strategy, ImpulseVen will create and maintain active social media profiles, providing its followers with latest updates on the project and other related information. The ImpulseVen team will respond to any queries the users may have regarding the project. The project's presence on social media is supported by targeted advertisement campaigns on those platforms, which will run in parallel to similar campaigns on leading crypto news websites in the form of banner ads, press releases and sponsored content.

15.2. Influencer Marketing

An extension of social media promotions, the platform will approach prominent personalities in the crypto, DeFi or financial services space with a huge following and encourage them to discuss the ImpulseVen ecosystem and its advantages. It will help spread the message to a large group through a source they trust or admire. The reach of these influencers is sometimes confined to a single channel/platform, hence the more the number of influencers on board, the better.

15.3. Participation in Events

Crypto events are a common occurrence, happening round the year in both online and offline formats. ImpulseVen will have a presence in these events by setting up a booth, as sponsors or keynote speakers to talk about the advantages of DeFi and how ImpulseVen promotes the use of DeFi. Apart from participation in these events, ImpulseVen will also conduct its own events in the form of webinars and meetups.

15.4. ImpulseVen Listings

ImpulseVen will be listing itself on DeFi projects listing platforms. Once the VEN token is launched, the project will get it listed on major cryptocurrency/token listing platforms like CoinMarketCap. In addition, to make the token more accessible, ImpulseVen will be listing it across multiple centralized as well as decentralized exchange platforms like UniSwap and more.

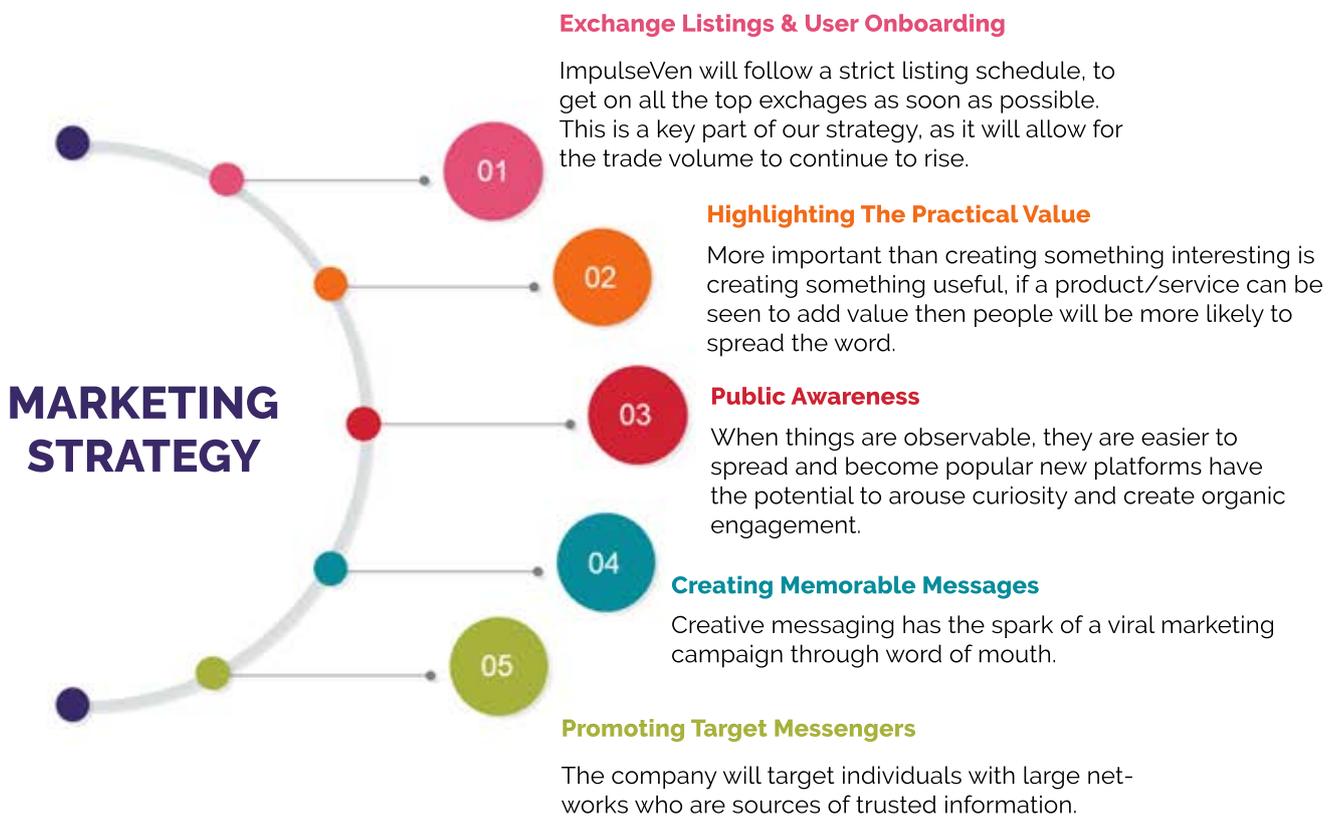

15.5. Educational Content

ImpulseVen will invest a considerable amount of effort to create educational materials in the form of video tutorials, blogposts, courses etc., to help new users navigate through its ecosystem and also learn about DeFi and its benefits. These tutorials will provide in-depth, impartial understanding of the space to its users and thereby encourages them to become part of the ImpulseVen community to enjoy its benefits without any apprehensions.

15.6. Community Management

The result of a community building exercise will witness people joining the ImpluseVen community, to be created and managed on some of the widely used platforms like Telegram, Discord etc. Once such communities are created, the platform will have dedicated community managers who are knowledgeable about the project interacting with users at all times. The community managers will be able to participate in discussions, answer queries, moderate the community and also further expand it by reaching out to more people.

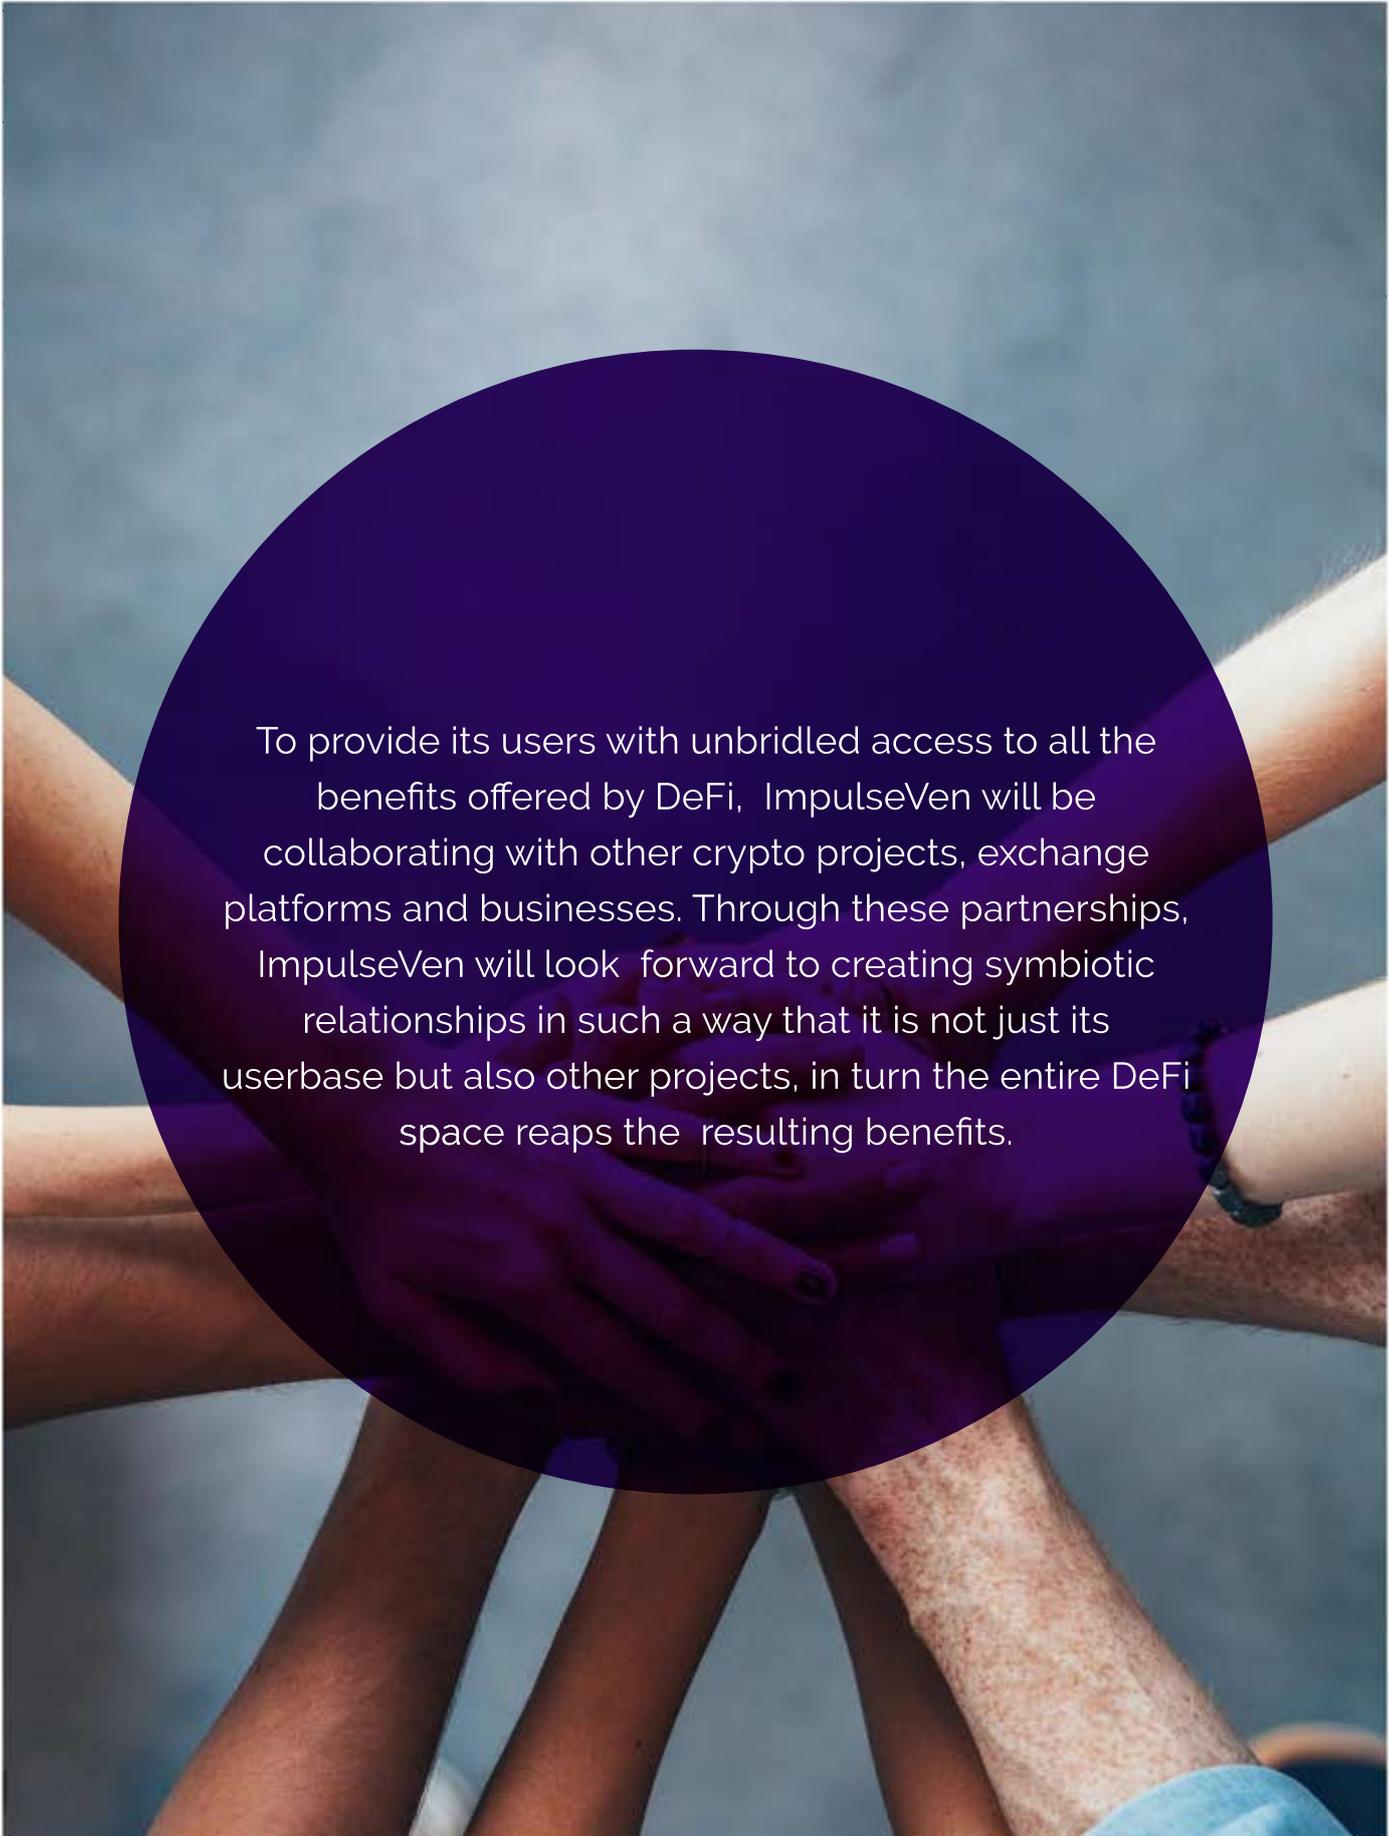

Partnerships

CONTENT

To provide its users with unbridled access to all the benefits offered by DeFi, ImpulseVen will be collaborating with other crypto projects, exchange platforms and businesses. Through these partnerships, ImpulseVen will look forward to creating symbiotic relationships in such a way that it is not just its userbase but also other projects, in turn the entire DeFi space reaps the resulting benefits.

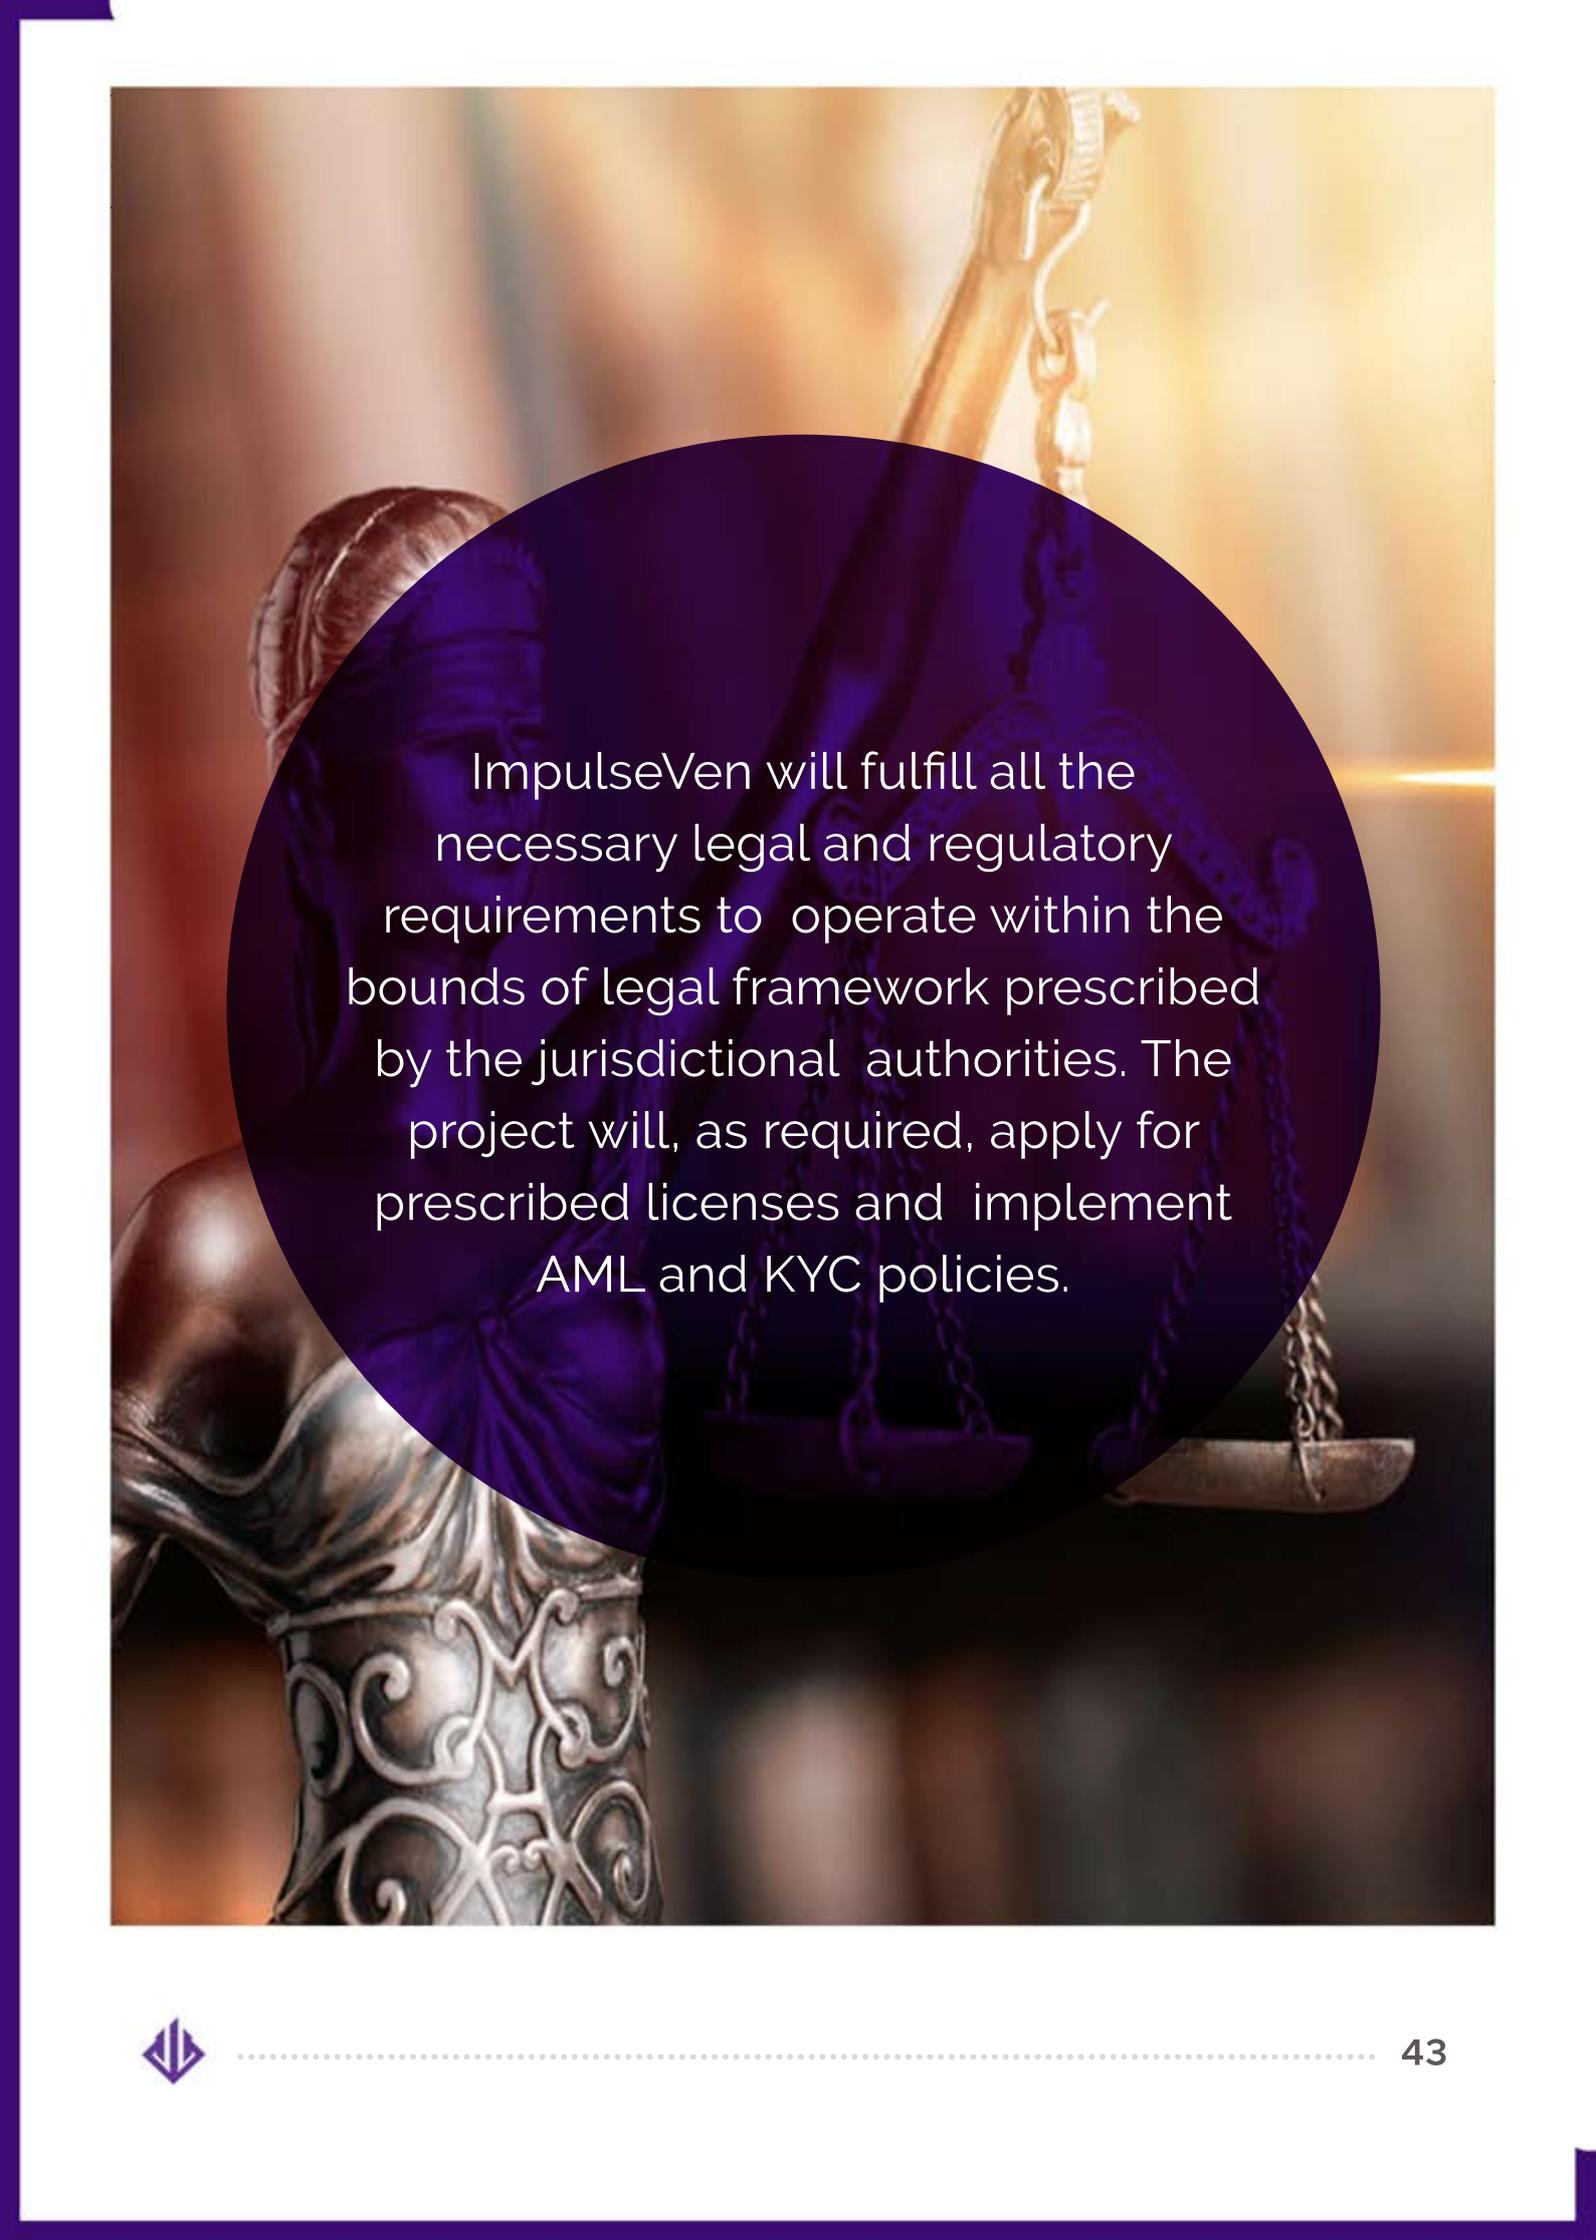

Legal and Regulatory Aspects

CONTENT

ImpulseVen will fulfill all the necessary legal and regulatory requirements to operate within the bounds of legal framework prescribed by the jurisdictional authorities. The project will, as required, apply for prescribed licenses and implement AML and KYC policies.
