

CREEDX

CREEDX is a side project of CREED TRC20 on tron network.

CREEDX is a social crypto experiment. Meaning the project is designed to see the human reactions and interactions. Everyone participating in the project fully accepts their own risks. The idea of the concept is fully designed on creating a value by the community and in the end the developers will leave it as a free smartcontract with an organic supply on justswap.io . When it is all released it will be a crypto asset and store of a value on tron network with no governance.

Tokenomics

There will be 1 000 000 000 000 000 creedx created and will be distributed as follows:

40 000 000 000 000 will remain on the creation account to be burned by team when all others are liquidated.

10 000 000 000 000 will be liquidated on justswap with 5 000 TRX setting 2B CREEDX for 1 TRX starting price

950 000 000 000 000 will be locked for in 19 seperate accounts

1 account holding 50T will be distributed to presalebuyers when all other 18 accounts are minted on justswap smartcontract..

Presale

There will be 200 packs in total each worth 250B CREEDX, total 200 packs will be 50T CREEDX

Round 1

3 days limited to 5 packs per person

50 packs each 150 TRX will be sold to 3+ CFB Holders.

Round 2

3 days limited to 5 packs for one person

50 packs each 250 TRX will be sold to 0.1+ CFB holders

Round 3

14 days no limitation

100 packs each 250 CREED will be sold to anyone.

1 person can participate on all 3 rounds seperately.

ON PRESALE NO ONE WILL RECEIVE ANY CREEDX. The amount of 50T CREEDX will only be distributed to presale participants when all other 18 wallets are minted in justswap contract. Unsold packs will also be burned and deducted from the total supply. Each pack will receive 250B CREEDX on distribution date.

Estimated launch day will be 1st September 2021. On condition that all packs are sold team may decide on launching the justswap contract earlier.

How will the system work?

After finishing the presale the justswap contract will be created with 10T CREEDx/5000 TRX. Starting price will be 2B CREEDX= 1 TRX. Since there is no one holding CREEDX at the beginning, the price will start to climb and the team will start selling to justswap from 18 wallets. The amount of TRX gained will be distributed as follows:

-70% will be added to liquidity on justswap

-10% will be used by the team to cover the fees.

-20% will be added to BEAST POOL for their contribution on the creation phase.

FREE CREEDX PLAN

When all packs are sold main liquidation wallet will remove 50% of the liquidity. 100% of The CREEDX removed from justswap liquidity will be burned to lower the circulation to a much lower amount. 90% of The TRX removed from justswap liquidity will be used to buy CREEDX from liquidity to boost the price on justswap at once providing large gains on CREEDX holders and again the bought amount will be burned.

10% of the TRX will be shared between CFB holders and CREED TEAM. And the team will free the smartcontract to crypto space.

CREEDX Concept and Goals

The idea behind the project is to create value and free it from all governance issues. The team will not list the project on any exchange. The teams role in this project is to manage justswap liquidity and let it to become people's own money. When this role is achieved there is two expected results:

- A token truely valued and governed by community like bitcoin.**
- Create and add a true value on tron network to increase the exposure of the tron network**

On condition that the final phase is not reached until 1st March 2022 the team will distribute the presale buyers share and burn the remaining CREEDX on any accounts. On worst scenario the CREEDX project will be free from governance on 1st March 2022.

Disclaimer

CREED TEAM holds no responsibility on loss of any kind of value for CREEDX users. Since crypto still has its own risks each and every participant in the project accepts to calculate their own risks.
