BankCoin is a key constituent of the fintech system which enables trading, saving activities and gives access to other upcoming services in the BankCoin ecosystem. BankCoin is created for two main objectives. Firstly, it is the energy of the internal mechanism in the BankCoin ecosystem. Secondly, it is the governance component of the BankCoin system. Each BankCoin wallet is initially provided with a predefined amount of BankCoin and cannot be used without a minimum BankCoin balance.

We strongly believe that there should be an efficient alternative to the existing payment and banking systems. In other words, our blockchain-based payment system aims to lower financial inclusion obstacles and provide financial services for the banked and unbanked. Therefore, our vision is to build the revolutionary and comprehensive banking platform for all users worldwide.

The BankCoin Community was developed to enable users to maximize the inherent benefits in the emerging world order of crypto currencies. It provides an all in one Ecosystem that ensures users of various persuasion engage in a program which will be beneficial to them leading to financial Independence. The BankCoin, which is the Digital Currency for the crypto community will be used as the instrument for trade. Being a self-regulated community, BankCoin activities will be determined by the interactions of the supply/ demand/distribution paths.

SUPPLY

Coin supply will occur mainly by Staking and Mining

DEMAND

Programs that ensures that BankCoin demand remains at peak

2	2%

Earn referral income in BTC, ETH and decide to withdraw or purchase BANKCOIN.

By staking your BankCoin, your computer becomes a dynamic node on the grid, processing and transmitting connections. It not only earns you extra BankCoin at an APR of 18%, it also reinforces our grid and security. Staking requires the coins to be held in your desktop QT wallet. This inspires people to take ownership of their finances rather than leaving their private keys in the hands of third party service

STAKING RULES:

Minimum Coin Staking Age is 8 hrs. Coins must be held in your QT wallet and coin age resets anytime coins are sent to another address. Once QT wallet is unlocked and staking resumes, it continues staking automatically until your wallet is unlocked.

ADVANCED STAKING FEATURE

By using this feature, which allows you to reserve a part of your BankCoin in the staking wallet, the flexibility of spending the reserved coins is enabled while the balance continues staking.

HOW TO STAKE:

- The BankCoin QT wallet is installed on your computer.
- Send BankCoin from Website to QT wallet
- Ensure you encrypt your wallet and make sure to remember your password.
- Unlock your wallet for staking only, enter your password and observe the green arrow at the bottom.

DEPOSIT BITCOIN OR ETHEREUM

Deposit your BitCoin or Ethereum on given deposit address

BUY BANKCOIN

Buy BANK from BankCoin Exchange

DOWNLOAD BANKCOIN DESKTOP WALLET

Now you can make BANK saving in your funding account.

STAKE BANKCOIN

You will stake BANK after finishing the Saving cycle

A decentralized exchange is an exchange market that does not rely on a third party service to hold the customer's funds. Instead, trades occur directly between users (peer to peer) through an automated process. This system can be achieved by creating proxy tokens (crypto assets that represent a certain fiat or crypto currency) or assets (that can represent shares in a company for example) or through a decentralized multi-signature escrow system, among other solutions that are currently being developed.

This system contrasts with the current centralized model in which users deposit their funds and the exchange issues an IOU that can be freely traded on the platform. When a user asks to withdraw his funds, these are converted back into the cryptocurrency they represent and sent to their owner.
